

SHORT DESCRIPTION OF TEN-T MOTORWAYS OF THE SEA-RELATED PROJECTS (2004)

PORTMOS – Integration of the Portuguese Ports and Maritime Systems in the Motorways of the Sea

This study aims at performing the feasibility analysis and identifying the technical and organizational requirements for the integration of the Portuguese port and logistic system in the future “Motorways of the Sea”.

The project will be developed in three stages:

- Definition of the concept/Model for the Motorways of the Sea in Portugal

This phase covers the technical, functional, infra-structural and organizational requirements and the evaluation of the impact of the integration of national ports in the MoS.

- Design and development of the info-structure to support the MoS in Portugal

This stage involves the definition of the user’s requirements for the info-structure, the design and development of the national info-structure to support the MoS and the promotion of the integration of all the transport activities.

- Pilot actions

The main goal of this stage is to define and demonstrate new activities, which shall involve several international partners with a view to identify and promote innovative maritime services. Adequate cooperation protocols shall be defined with ports in the 4 MoS areas.
